

Duff Pastoral

have been servicing the nutritional needs of livestock producers with Liquid Supplement for the last 5 years.

With depots located at Goondiwindi & Tenterfield, Duff Pastoral are able to service an area spanning from the Northern Rivers of NSW through to the New England and Queensland border regions and west through to St George.

Duff Pastoral are now Distributors of Feedpro Liquid Feed Supplement.

We've got you covered!

Benefits and Features of Feedpro Liquid Feed

Improved Animal Performance

This is achieved first by increasing the animal's ability to utilise fibre and secondly by supplying a balanced feed supplement that will help correct protein and mineral deficiencies which may be limiting the animal's performance.

Safe and Efficient Urea Feeding

Through the incorporation of "Fixed Urea", Feedpro Liquid Supplement delivers a greater level of safety to your cattle than home mixed brews which contain urea. Urea will stimulate an animal's appetite as well as supplying essential protein and energy to rumen microbes.

Rain Safe

Rain will sit on top of the Feedpro Liquid Supplement in the trough and will be readily consumed by the cattle. The Fixed Urea process eliminated toxicity problems normally associated with other supplements.

A Comprehensive Mineral Package

Feedpro Liquid Supplement contains a complete balance of nutrients and minerals.

Minimised Seasonal Weight Losses During Winter

This will mean earlier turn off ages for store cattle and improved body condition for breeders at calving, enhanced milk production and higher conception rates.

Nil Capital and Labour

Feedpro Liquid Supplement is delivered directly into 500 Litre troughs provided by Duff Pastoral. This provides the customer with a double bonus; no mixing or storage equipment is required and there is no additional labour input needed for supplementing the livestock.

Consumption Control and Cost Control

Feedpro Liquid Supplement provides a unique method of limiting intake to a level which can improve your animal's performance whilst meeting your budgeted costs. Two blends one Breeder and one Yearling are blended together at the trough. By varying the ration of Breeder and Yearling the cattle's nutrient requirements can be met and the consumption level controlled.

FPA Liquid Supplement Product Specifications

Nutrient	Units (as fed)	FPA Yearling	FPA Developer	FPA Breeder
Total Crude Protein	%	16.10	25.55	35.00
Min. Natural Protein	%	3.22	3.01	2.80
Min. Equiv. Cr. Protein	%	12.88	22.54	32.2
Max Urea	%	4.5	7.85	11.2
Energy	MJ/kg	6.25	5.75	5.25
Min Calcium	%	0.5	0.46	0.42
Min. Phosphorus	%	0.55	0.78	1.00
Max. Salt	%	3.12	3.16	3.16
Magnesium	%	0.245	0.23	0.215
Sulphur	%	0.37	0.35	0.34
Potassium	%	2.64	2.43	2.22
Cobalt	mg/kg	6.05	6.05	6.05
